Project Overview & Business Objectives

Project Overview

The Coffee Shop Sales Dashboard was created using the Microsoft Excel to analyze sales performance and transform raw transaction data into meaningful business insights. The dashboard enables users to monitor revenue, customer purchasing behaviour, store performance, product performance, and key sales metrics through interactive visualizations and KPIs.

Tools Used

Microsoft Excel – Dashboard Development

Pivot Tables – Data Analysis

Pivot Charts – Data Visualization

Slicers – Interactive Filtering

Microsoft PowerPoint – Business Report

Business Objectives

This dashboard was developed to answer the following business questions:

- How do sales vary across different months?
- Which day of the week receives the highest number of orders?
- During which hours does the coffee shop experience the highest sales?
- Which store location generates the highest sales?
- Which products are the top and bottom performers by sales?
- Which beverage size contributes the most sales?
- How do weekday and weekend sales compare?
- Which product category generates the highest revenue?

Key Performance Indicators (KPIs)

The dashboard uses five Key Performance Indicators (KPIs) to measure the overall performance of the coffee shop. These KPIs help us understand sales, orders, quantity sold, and customer spending in a simple way.

Total Sales (\$698,812)

Represents the total revenue earned from all customer transactions. It measures overall sales performance.

Total Orders (149,116)

Represents the total number of customer orders placed during the selected period. It indicates customer demand.

Total Quantity Sold (214,470)

Represents the total number of products sold during the selected period. It helps measure product demand.

Average Bill Value (\$4.69)

Represents the average amount spent by a customer in one order. It reflects customer spending per transaction.

Average Selling Price (\$3.26)

Represents the average selling price of each product sold. It helps evaluate the overall pricing of products.

Sales Trend Analysis

Monthly Sales

How do sales vary across different months?

Source: *Sales by Month (Line Chart)*

Finding

Sales increased steadily from January to June.

February showed a slight decline.
June recorded the highest sales (**\$166K**).

Business Insight

Sales showed a consistent upward trend, indicating steady business growth during the analysis period.

Orders by Day

Which day of the week receives the highest number of customer orders?

Source: *Orders by Day of Week (Column Chart)*

Finding

Friday recorded the highest number of customer orders (**3.5K orders**).
Saturday had the lowest order volume.

Business Insight

Customer demand is higher on weekdays than weekends.

Hourly Sales

During which hours does the coffee shop experience the highest sales?

Source: *Sales by Hour (Column Chart)*

Finding

Sales peaked at **10:00 AM**, generating approximately (**\$88.7K**) in revenue.
Sales gradually declined after the morning hours.

Business Insight

Morning hours represent the peak sales period, making them the best time to prioritize staffing and inventory availability.

Overall Insight: Sales increased over time, customer demand was strongest on Fridays, and peak activity occurred during the morning hours.

Store & Product Category Performance

Store Performance

Which store location generates the highest sales?

Source: Store Performance (Bar Chart)

Finding

Hell's Kitchen generated the highest sales (\$236.5K).

Astoria recorded \$232.2K in sales.

Lower Manhattan generated the lowest sales (\$230.1K).

Business Insight

Sales remained consistent across all three store locations, with Hell's Kitchen generating the highest revenue. This indicates stable performance across stores while highlighting Hell's Kitchen as the top-performing location.

Product Category Performance

Which product category contributes the most to total sales?

Source: Product Category Sales (Doughnut Chart)

Finding

Coffee generated the highest sales (\$269.9K).

Tea was the second-highest revenue-generating category (\$196.4K).

Packaged Chocolate contributed the lowest sales (\$4.4K)

Business Insight

Product category sales were led by Coffee, which generated the highest revenue. This highlights Coffee as the primary revenue-generating category.

Overall Insight: Store sales remained balanced across all three locations, while Coffee was the highest revenue-generating category, highlighting it as the coffee shop's primary sales driver.

Top & Bottom Product Analysis

Top 5 Products

Which products generate the highest sales?

Source: *Top 5 Products (Horizontal Bar Chart)*

Finding

Ethiopia generated the highest sales (**\$42.3K**).

Sustainably Grown Organic ranked second (**\$39.1K**).

Jamaican Coffee River (\$38.8K), **Brazilian (\$37.7K)**, and **Latte (\$36.4K)** also contributed significantly to total sales.

Business Insight

The top-selling products are the primary revenue drivers and should remain well stocked to meet customer demand.

Bottom 5 Products

Which products generate the lowest sales?

Source: *Bottom 5 Products (Horizontal Bar Chart)*

Finding

Guatemalan Sustainably Grown recorded the lowest sales (**\$1.3K**).

Hazelnut Syrup (\$1.8K) and **Chili Mayan (\$1.9K)** also generated relatively low sales.

These products contributed the least to the overall revenue.

Business Insight

The lowest-selling products contributed only a small portion of total revenue. These products may require further evaluation to improve their sales performance.

Overall Insight: The top-selling products generated a significant share of total revenue, while the bottom-selling products present opportunities to improve overall sales performance.

Customer Behaviour Analysis

Size-wise Sales

Which beverage size generates the highest sales?

Source: *Size-wise Sales (Doughnut Chart)*

Finding

Large beverages generated the highest sales (**\$238.0K**).

Not Defined ranked second (**\$214.7K**).

Regular generated **\$199.8K** in sales.

Small beverages recorded the lowest sales (**\$46.4K**).

Business Insight

Large-sized beverages generated the highest revenue, indicating a strong customer preference for larger drink sizes.

Weekday vs Weekend Sales

How do sales compare between weekdays and weekends?

Source: *Weekday vs Weekend Sales (Doughnut Chart)*

Finding

Weekday sales totalled **\$503.6K**.

Weekend sales totalled **\$195.2K**.

Weekdays generated significantly higher revenue than weekends.

Business Insight

Weekdays generated significantly higher sales than weekends, indicating stronger customer activity during the workweek.

Overall Insight: Large-sized beverages generated the highest revenue, making them the most preferred beverage size among customers.

Note: "Not Defined" represents transactions where the beverage size was not specified in the dataset.

Key Findings & Business Recommendations

Key Findings

- **Sales** showed a steady upward trend, with **June** recording the highest monthly sales (**\$166K**).
- **Peak sales** occurred at **10:00 AM (\$88.7K)**, making the morning hours the busiest period of the day.
- **Hell's Kitchen** was the **highest-performing store**, generating **\$236.5K** in sales.
- **Coffee** was the **highest revenue-generating product category (\$269.9K)**, highlighting strong customer demand.
- **Ethiopia** was the **top-selling product (\$42.3K)**, while **Guatemalan Sustainably Grown (\$1.3K)** recorded the lowest sales.
- **Large-sized beverages (\$238.0K)** and **weekday sales (\$503.6K)** contributed the most to overall revenue.

Business Recommendations

- **Increase staffing and inventory during peak morning hours**, especially around **10:00 AM**, to efficiently handle higher customer demand.
- **Maintain sufficient stock of Coffee and top-selling products** to prevent stock shortages and maximize sales.
- Apply successful **operational practices** from **Hell's Kitchen** to other store locations to improve overall performance.
- **Introduce promotions or review pricing for low-performing products** to increase customer interest and sales.
- **Launch special offers or loyalty campaigns on weekends** to encourage more customer visits and improve weekend revenue.

Conclusion

This dashboard successfully transformed raw coffee shop sales data into meaningful business insights. By analyzing sales trends, customer behaviour, store performance, product performance, and customer purchasing patterns, the dashboard provides actionable recommendations to support data-driven decision-making and improve overall business performance.
